DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 8-10 is withdrawn in view of the newly discovered reference(s) to U.S. Patent No. 6,028,840 to Worster. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,028,840 to Worster in view of U.S. Patent No. 5,982,748 to Yin et al.

Regarding to claim 8, Worster disclose a device in figure 8 performing:

Providing ATM virtual connections (Col. 11, line 65-col. 12, line 20);

Assigning incoming connections to variable bit rate (VBR) connections (a first class connections) depending on QoS parameters (result of predetermined analysis) (Col. 12, lines 1-20). The VBR connections are subdivided into connection classes (sub-classes). Analysis is performed in sequence on each connection class until the incoming connection is assigned to a connection (Fig. 9)

Worster fails to disclose assigning the incoming connection to a first or a second class depending on the result of predetermined analysis. Yin et al disclose assigning the incoming connection to a VBR (first) or a CBR (second) connection depending on the connection request

Art Unit: 2663

(result of predetermined analysis) (Figure 2). A skilled artisan would have been motivated to modify the device of Worster so that it assigns the incoming connection to a CBR or VBR connection in order to provide either CBR or VBR connection depending on the requirement of a particular data flow as taught by Yin et al (Col. 1, lines 39-55). Therefore, it would have been obvious to a person having ordinary skill in the art by the time the invention was made to assign the incoming connection to a first or a second class depending on the result of predetermined analysis.

Regarding to claim 9, the parameters es, and C are parameters of connection line.

Regarding to claim 10, Worster discloses the parameters es are updated (Col. 11, lines 20-25).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nhat Do whose telephone number is (703) 305-5743. The examiner can normally be reached on 8:30 AM - 5:30 PM Monday - Friday.
